Big Stick Adventures (BSA) incorporate a number of green and environmentally sustainable elements into its team building and incentive programs.

Water Management

- 100% use of self captured rain water for vehicle cleaning - coastal cleanup programs

Waste Management

- Complete recycling of event and office waste - all recyclable waste is recycled with local council
- We have adopted a paperless office. The little paper we do use is 100% recycled paper which in turn is recycled once we have finished with it
- Majority of communication through phone, text and email

Energy Management

- Our office is north facing and with the ventilation system reversed results in minimal heating being required in winter months
- Use of hybrid and low emission cars
- We use low amp halogen lights
- We offset carbon credits on all airplane flights
- Our office is cooled by wind generated ventilation/exhaust system removing the need for air-conditioning and power generated fans coolers
- All electrical appliances are turned off when not in use.

Other

- Tree planting programs - complete with regular tree updates
- Coastal revegetation programs
- Low environmental impact eco itineraries

These elements are incorporated into our team building and incentive programs to provide companies with hands on experience and learning outcomes in being green and socially responsible. As a result our events have a positive effect on the environment.
